Re: Aircraft Noise Complaint

We the homeowners

would like to express our fillings in regards to the O'Hare expansion program. As citizens of Chicago we are proud of the airport facility development; however, since the airport's growth the aircraft noise level has greatly increased.

Now, we are exposed to aircrafts that are not only landing over the top of our roofs but also taking off. This kind of noise is hard to live with. It is difficult to enjoy simple daily activities as family conversation, watching TV, outdoor activities, and most important sleep. Frequently low flying jets are intolerable at all hours of the day and night. Many of us have experienced vibration of structure of our units. Numerous renovations of our units are expensive and do not resolve the noise problem that we have to live with. Furthermore, we are concerned about our property becoming less desirable in sluggish as it is today's real estate market.

We are aware of the Residential Sound Insulation Program and know that numerous building in our area was already isolated to reduce the noise. According to your web side our buildings are not in the FAA sound contour area, however to our knowledge the noise level was never measured for our building. Our buildings are 3 stories high and may be eligible for the residential sound insulation. If possible we would like to request that the noise monitor be installed in our area, so the problem can be identified.

Thank you for your time considering our complain. We believe that with your assistance we will be competent to find a resolution to our concerns. Enclosed is attached a list of homeowners' signatures.

Thank you,
